

OVERVIEW

At **Grey Fox Consulting, Inc.** we understand the complex and competitive challenges associated with today's construction industry, and recommend civil and structural designs that blend high quality with a reasonable price. This delicate balancing act requires the kind of expertise, creativity, communication skills and leadership that are the centerpiece of Grey Fox Consulting, Inc.

With more than 20 years of experience in consulting and in-house engineering for contractors, we know how to merge design sensibilities with construction realities. Over the years, we've applied our capabilities in virtually every industry; specified advanced systems and materials; delivered highly detailed construction documents; and developed designs that have ultimately surpassed our clients' expectations. Make your life easier – put our experience to work on your next project.

"We go beyond the role of a traditional engineering consultant - we take responsibility for bringing management to the design process. This, along with strategic thinking uncommon to our craft, delivers additional value to the final product."

SERVICES

Conceptual stage studies

Preliminary design & cost estimates

Navigation of the regulatory
& approval authority process

Final designs and complete construction
documentation & specifications

Onsite construction phase observation

Structural reviews & evaluations
of existing buildings

Forensic engineering

Peer reviews

Design-build expertise

Owner's representative

Complete civil/site development

Sustainable energy evaluation
& engineering

Expert witness testimony

NEW ENDEAVORS

"A new project is exciting because the future is filled with tremendous possibilities for everyone involved. We create a consulting environment in which those possibilities thrive, in spite of the challenges associated with the design and construction process."

COMPETITIVE ADVANTAGE

- We assume leadership of the coordination role, so that architects and other design team members can focus on their specific areas of expertise.
- Our tightly managed design process anticipates and circumvents problems, saving time and money for the owner.
- Our detailed design documents allow for contractors to bid on jobs more accurately, thereby saving the client money & improving the construction process.
- We specify high quality construction materials to ensure the value and longevity of our clients' project.

"Our clients face many challenges, particularly with more complex projects. A seasoned consultant can reduce the risks by drawing on broad expertise and the ability to address specific needs during the life of a project."
